End cutting pliers

9.5 cm | End cutting

For cutting protruding ends of fine, soft wire close to the surface, for example on jewellery and models.

Item number	**10319**
GTIN	4260606871428

Warnings and safety information

Protect your eyes. Wear safety glasses when cutting. Secure the wire end and direct the cut away from people.

Risk of cuts and crushing. Hold the pliers only by the handles. Keep fingers away from the cutting edges and joint.

Protect the cutting edges. Do not cut spring wire, hardened steel or thick wire. Use the pliers only with intact, sharp cutting edges.

Risk of electric shock. Work only on de-energised parts. The handle covers provide no protection for live work.

Operation

Check the joint, handles and cutting edges before use. Use the pliers only if they move freely, are undamaged and have clean, dry handles.

1. **Secure the workpiece.** Support the workpiece. Hold the protruding end with a second pair of pliers and keep fingers out of the cutting area.
2. **Approach head-on.** Bring the plier head to the wire from the front. Align the cutting edges parallel to the workpiece surface without pinching it.
3. **Cut off the protruding end.** Close the handles evenly without resting the pliers against the workpiece or levering them. Check the cut for sharp edges.

Care and storage

Remove wire fragments with a brush. Wipe the pliers dry with a cloth and store them out of reach of children.
